

Discover Alvara Force: Effective insect control for your crops

Harness the Power of Nature for Effective and Sustainable Insect Management

Alvara Force is a natural crop protection product based on odor and flavor compounds derived from garlic. Through a special process, Deruned has extracted these compounds to create Alvara Force, a unique liquid product that effectively combats insects.

How does Alvara Force work?

1. Enhances the effectiveness of chemical and biological control: Alvara Force alters the scent and taste of your plants, making them less attractive to insects. This disrupts the insects' behavior, causing them to become restless and leave their hiding places. As a result, chemical crop protection agents and natural predators can be more efficiently deployed in the fight against insects. Using Alvara Force reduces the frequency of chemical applications, resulting in improved crop condition.

2. Exhibits systemic action in plants: Alvara Force acts systemically within plants and can be applied through feeding. Its effects within the plant last approximately 7 to 10 days. After this period, the substances in the plant are converted into components used for normal metabolism.

How to use Alvara Force?

Alvara Force can be used throughout the year to support chemical and biological insect control. However, it is recommended to apply Alvara Force preventively, preferably early in the spring. Early exposure to Alvara Force prevents insect infestations in your crops. Alvara Force does not lead to resistance. Ideally, use a dosing unit to administer Alvara Force. If not available, add the weekly dosage of Alvara Force to the feed in a single day.

Dosage:

- For thrips: 1 to 2 liters per hectare, repeat weekly.
In case of high infestation pressure, we recommend 2 liters per hectare.
- For other insects: 2.00 liters per hectare, repeat weekly.

How to store Alvara Force?

Do not store Alvara Force in the chemical cabinet. After opening, Alvara Force remains usable for two months if the bottle is tightly closed and stored in a cool, dark place. Do not mix Alvara Force with hydrogen peroxide products. Shake the bottle well before use.

Discover Alvara Force, the effective solution for insect control in your crops. Increase the efficiency of your pest management strategies and maintain the health of your crops with Alvara Force. Contact us today for more information.
